

KARANAM KARTHIK

Data & Platform Engineer — Databricks | GenAI | Cloud Automation

Hyderabad, India | +91 62813 83359 | karanamkarthi5@gmail.com | [linkedin.com/in/karnmkk](https://www.linkedin.com/in/karnmkk) | [Portfolio](#)

PROFESSIONAL SUMMARY

Data/Platform Engineer specializing in Databricks, with hands-on experience across data pipeline engineering (PySpark), infrastructure-as-code (Terraform), and identity/access governance (Active Directory, LDAP, SCIM, Unity Catalog). Databricks Certified Generative AI Engineer Associate with production experience building RAG pipelines and multi-agent systems for internal knowledge retrieval.

TECHNICAL SKILLS

Languages & Data: Python, SQL, PySpark, Oracle SQL, SQL Server

Platform & Cloud: Databricks, Unity Catalog, AWS, Terraform

Identity & Governance: Active Directory, LDAP, SCIM, Service-Principal Provisioning

GenAI: Retrieval-Augmented Generation (RAG), LangGraph, Vector Search / Vector Databases, Databricks Genie

PROFESSIONAL EXPERIENCE

Junior Engineer — Byte Analytics Private Limited

Feb 2024 – Present

Hyderabad, India — Contracted to Continental Resources Inc. — Data engineering, platform automation, and identity governance for enterprise Databricks environments

Access Automation & Identity Governance

- Built a self-service access-automation platform for Databricks, SQL/Oracle, and AI Platform environments, covering request intake, approval routing, provisioning, notifications, and lifecycle tracking.
- Implemented IAM and governance workflows across Active Directory, LDAP, SCIM, and Unity Catalog, including schema/table-level privileges, user synchronization, and service-principal provisioning.
- Integrated approval-driven provisioning with Helix Work Orders, enabling automated status tracking from request submission through completion or exception escalation.

Data Ingestion & Pipeline Engineering

- Built PySpark data pipelines on Databricks (AWS) to ingest and process large-scale datasets from an external API, with validation checks for data accuracy and integrity.
- Connected to SQL Server to verify and validate source data, then loaded and transformed it into Databricks as part of the ingestion pipeline.
- Designed a file-based ingestion pipeline handling 1.5M files, including download orchestration, audit-table logging, and transformation/load into Databricks.
- Automated pipeline execution via scheduled Databricks jobs to reduce manual intervention and improve workflow reliability.

GenAI / RAG Systems

- Designed and implemented a Retrieval-Augmented Generation pipeline using Databricks Vector Search, including PDF text extraction, chunking, and embedding storage.
- Built a Databricks-native multi-agent system with LangGraph, combining a RAG agent (unstructured SharePoint/OneDrive knowledge) with a Genie agent (structured/relational data).
- Built a supervisor agent that routes user queries to the appropriate agent based on question type, unifying structured and unstructured retrieval in a single interface.

Infrastructure as Code

- Integrated Databricks into existing cloud infrastructure using Terraform, standardizing provisioning across environments.
- Managed 200+ workflows in Terraform, automating shared-workspace creation, access requests, and Databricks object provisioning (jobs, clusters).

Backend Development Intern — Celebal Technologies

Remote

- Built authentication (login/logout) for a REST API using Passport middleware.
- Developed a flight-booking chatbot using the Microsoft Bot Framework.

EDUCATION

B.Tech, Computer Science and Engineering — Aditya College of Engineering and Technology

East Godavari, India | 2020 – 2023

Diploma, Computer Management Engineering — Shree Vidyanikethan Engineering College

Tirupati, India | 2017 – 2020

CERTIFICATIONS

- Databricks Certified Generative AI Engineer Associate
- Full Stack Development, HeroVired (2021–2022)
